Projects

ChatbotGPT - using AI technique

- In this project, I'm developing Android application that uses AI technology to generate realistic and engaging conversations with users. It leverages the power of GPT-3, a deep learning model that can produce natural language texts on any topic

Virtual Mouse using Hand Gesture and Voice Commands – using OpenCV and MediaPipe

- In this project, we are developing a Software for providing a hands-free and intuitive interaction experience to control the cursor on the screen. It uses computer vision and speech recognition to detect the user's hand movements and voice inputs.

Online Banquet Booking System

- In this project, we developed a web application that allows users to book banquet halls for various events and occasions. It provides information about the availability, capacity, facilities, and prices of different banquet halls by using MySQL and PHP.

Technical Skills or Computer Skills

- ❖ Software developer
- ❖ Web application developer
